

Recker & Boerger

Is serious about recycling. Most companies talk about going green---we get it done! Our Big Green Machine is a 4,000 SF building—dedicated to recycling.

The cardboard boxes your products were shipped to us in are compacted and reused.

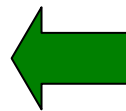

The skids are ground into landscape mulch.

Air Conditioners and Heat Pumps are collected over the summer and taken apart throughout the winter, recycling every component.

To This

Even the oil from your compressor is collected for reuse.

Old Appliances are unloaded and once all reusable components are removed and collected, the gutted appliances are collected in large bins, picked up daily to be recycled.

Recycling your old refrigerant helps protect the atmosphere. Recycling reduces the need for land filling and incineration, as well as saving energy and conserving natural resources.

Last year Recker & Boerger recycled 174,320 lbs. of cardboard and 4,208,802 lbs. of metal.

“Reduce, Reuse, Recycle”....REDUCE the amount and toxicity of trash thrown away--REUSE containers and products where possible--RECYCLE as much as possible.

Recycling....doing our part for tomorrow, today!
